**Subject:** Opposition to Gold Mining in Leitrim

To whom it may concern, There is a growing body of evidence that the mining of gold is an energy intensive and carbon heavy process that has the potential to negatively impact on a wide range of areas including water quality, landscape, agriculture, tourism and biodiversity amongst others. The carbon heavy, energy intensive nature of the industry is also not compatible with the sustainable future that we are trying to create for this and following generations. The possible development of such an extractive industry would be incompatible with our obligations to urgently tackle climate change and the worst impacts of the climate emergency. This matter has become all the more urgent with the granting of prospecting licenses for 47 townlands in the county. The Leitrim County Development plan should reflect the unanimous will of Leitrim County Councillors who have registered their opposition to gold mining. I have attached some links which support my views and would like to make it extremely clear that any extractive processes should be limited to a bare minimum in Leitrim and all of Ireland for that matter. We are stewards of this island and must leave it in the same, if not better, condition for future generations to come.

Thank you for taking the time to read this email.

Kind regards,

Jack Cavaliero
