

- Notes
1. Topographical information has been taken from drawing 'Manorhamilton Fire Station underground', some information may have been removed for clarity. Please refer to original drawing for full details.
 2. This drawing should be read in conjunction with the utility survey report.
 3. All depths are taken to top of service, unless "L.L." is indicated, in this instance the depth is to the invert of the pipe. This is for drainage pipes at manholes only.
 4. As this is a non-intrusive survey only, all utilities should be visually verified by safe digging practices to confirm depths and alignments of survey.
 5. Non-intrusive surveys cannot guarantee every possible service under the ground is located. Care must be taken when site works begin, as services that are not locatable through non-intrusive methods may exist on site.

Cautionary Notes

Electro-detection techniques have been used in the location of underground services. The results are not infallible and trial excavations must be carried out to confirm service identification, positions and particularly depths. Although all reasonable effort has been made in searching available record drawings, the completeness of the underground service information cannot be guaranteed.

Any excavations undertaken on site are to be in accordance with HSA Code of Practice for Avoiding Danger from Underground Services 2016.
